LogMatrix

LogMatrix NerveCenter

What Is It?

NerveCenter is a network management toolkit that extends the functionality of other network management platforms. Powered by finite state modeling logic, NerveCenter enables specific knowledge of environments and unique functionality to be incorporated into a solution.

What Does It Do?

❖ Provides a framework for modeling problem resolution behavior.

❖ Enables you to monitor business services and applications.

❖ Fully customized alerting – send alerts by e-mail, instant message, or SMS, or to other network management solutions.

❖ Powerful Event Correlation Engine

❖ Protocols include SNMP, ICMP and WMI, and fully extensible through Perl.

Why Is IT Unique?

❖ Flexibility to monitor applications and business services.

❖ Provides extended event correlation capability.

❖ Use evolving knowledge of the environment to build predictive, proactive monitoring into the solution.

❖ Automate the information gathering process.

❖ Adjust quickly to changes in the environment through a flexible model building approach.

What do I Need to Run It?

❖ Operating System (Server): Linux/Solaris/Windows

❖ Operating System (Client): Windows

❖ Memory: 4+ GB RAM

❖ Disk Space: 160 GB

❖ Swap: 2 GB

❖ Scalability is based on server capabilities

Would your current solution gain a competitive advantage if it had additional functionality such as automation capabilities or advanced correlation? NerveCenter can incorporate unique automation, analysis and correlation requirements into your solution. By combining NerveCenter's unique finite state modeling with conditional logic, analysis and correlation you can add enhanced functionality to your solution.

Here are some examples of how NerveCenter can enhance other solutions:

❖ NerveCenter uses synthetic transactions to verify performance, security and integrity of applications.

❖ NerveCenter applies specific conditional logic to trigger actions either within NerveCenter or to other devices or applications.

❖ NerveCenter analyses information from various different sources to provide customized functionality, including at the system level.

❖ NerveCenter correlates events by time, over periods of time, by sequence, by frequency, by associate, or by any combination of these.

LogMatrix Offers Flexible Partnering Programs

❖ Partner as a joint solution.

❖ Technology Partner as OEM

Call us with your Product Functionality challenge and we'll discuss you a NerveCenter solution to fit your needs.
